# Hydroquinone Free Dipping Adhesive Resins

Fully Approved to EU Cosmetic Regulation 1223/2009

## Great Performing Adhesive Resins for Dipping Systems

In response to the rapid growth in acrylic powder dipping systems, Chemence has launched two brand new resins - specifically designed to work with dipping powders - to give rapid application and to produce a smooth, flawless finish that needs no top coat and only very little buffing.

Unlike other adhesive resins, many of which are sold illegally, as they do not conform to EU cosmetic safety regulations, Chemence adhesive resins are completely Hydroquinone free and fully approved to the latest EU cosmetic safety regulations.

### BUILDER RESIN

Use on the nail as a base coat for any dipping powder system. This medium viscosity BUILDER RESIN will not run off the nail and bonds well to both the nail and the dipping powder to give a great foundation to your powder system.

- Fantastic bonding properties
- Forms a great foundation to your dipping system

### DIPPING POWDER

Dip the entire nail into the powder colour of your choice. Remove excess powder from the nail surface with a soft brush.

### GEL OVERLAY

Unique to Chemence, this GEL OVERLAY resin is formulated to be virtually self levelling and dries to a flawless finish which needs only a light 3-way buffer to bring out a beautiful shine to your dipping colour system.

- Self levelling
- Flawless finish
- No other top coats are needed
- Dries to a lovely shine

## Hydroquinone Free

### OUR ADHESIVE RESINS DO NOT CONTAIN HYDROQUINONE

- Many top selling dipping adhesive resins have illegal levels of Hydroquinone and should not be sold in the EU.
- Our resins fully meet and conform to EU cosmetic safety regulations.
